

Forklift Fork Positioners

Fork Positioner for Forklift - The fork positioner is actually a hydraulic apparatus that allows the driver to be able to control the lift truck without leaving the seat. They are constructed out of high quality materials and are designed to endure the most challenging operations and work environments. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate much more precise carrying and placement in a quicker and more efficient way.

The unique fork pocket design enables operators to be able to safely swing the unit's forks without any worry of damaging the positioning cylinders. This could allow the operator the choice to either perform simultaneous or independent fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on available units.
